Professional Summary

Computer Science graduate with experience in software QA, data validation, database administration, website design and hardware diagnostics. Proficient in Java, C++ and Kotlin, with a focus on software quality and process improvement.

Technical Skills

- **Languages:** Java, C++, Kotlin, Python, Assembly, SQL, HTML, CSS | **Version Control:** Git, GitHub
 - **QA and Testing:** Functional, Regression and Exploratory Testing, Bug Reporting, Data Validation, Process Documentation
 - **Database and Web:** Database Administration, Relational Databases, Responsive Website Design
 - **Tools and Hardware:** MS Office, Photoshop, Premiere Pro, After Effects, Canva, Hardware Diagnostics, PCB Repair and Soldering
-

Professional Experience

IT Specialist | *Freelance* | Aug 2018 - Present

- Designed, deployed and maintained responsive websites and database systems for client projects.
- Diagnosed and resolved hardware, OS and software issues; performed component upgrades and PCB repair.

Intern Business Quality Analyst | *Sorosoro Ibaba Development Cooperative* | Jun 2025 - Jul 2025

- Analyzed business process data to identify quality gaps, bottlenecks and efficiency opportunities.
- Built quality metrics dashboards and validated accuracy across high-volume operational reports.
- Reviewed process compliance and helped update SOPs based on quality review findings.

Game Tester | *IGG Games (Contract)* | Oct 2021 - Apr 2024

- Executed functional, regression and exploratory testing on pre-release game builds.
 - Documented and tracked bugs and UI defects with clear reproduction steps for developers.
-

Projects

Prototype Hybrid Scheduler | *Lead Developer, Academic Thesis* | github.com/leaurix/PrototypeHybridScheduler

- Designed and implemented a hybrid CPU scheduling algorithm, running comparative simulations to evaluate execution time, resource allocation and task prioritization.

Collaborative Projects | *Contributor, Artist, Backend Developer*

- [Dumpster Dash](#): 2D waste-sorting game in Python and Pygame with a Firebase real-time leaderboard.
 - [tuTok!](#): Python OOP app for anonymous filing, tracking and management of student bullying reports.
 - [ALUSim](#): ALU simulator modeling binary operations, control logic and CPU instruction cycles.
 - [TrackIt](#): application logic, features and UI integration for a tracking app.
 - [ProTomo](#): module development, code reviews, data validation and feature testing.
-

Education

Bachelor of Science in Computer Science | *Batangas State University - Alangilan* | 2026

Languages: English (Fluent), Filipino (Native), Russian (Basic)
